Imagine ...

your child blossoming to her full potential.

KUMON[®]
MATH. READING. SUCCESS.

Fulfilling every child's promise may be an ambitious goal for an after-school math and reading program. But like you, Kumon has the greatest aspirations for your child. We aim higher because we're committed to taking her further.

Your child's journey of self-discovery begins with a single accomplishment. Solving an equation that was once out of reach. Understanding a paragraph that didn't make sense before. When a child earns that victory on her own, she's emboldened to take on the next challenge. And with each success that follows, she strives to do more.

Children of all abilities, from preschool through high school, flourish with Kumon. A fifth grader may be revisiting basic multiplication, while a second grader is already tackling fractions. Each overcomes her own challenges on her own terms, and in doing so finds her own sense of purpose.

With uncompromising devotion and diligence, a Kumon Instructor monitors your child's progress, and helps her set and meet goals. Providing encouragement every step (and occasional misstep) of the way, her Instructor constantly fine-tunes the study plan to her particular and ever-changing needs. Kumon is a truly individualized program.

From our earliest exercises, Kumon sets the stage for further achievement. A girl completing sentences develops critical reasoning. A boy adding negative numbers prepares for the rigors of algebra. They're building comprehension and computation skills that arm them for the challenges ahead. And they're paving the way for advanced study—which is exactly where Kumon leads them.

Now that would be truly amazing.

A child with the means and motivation to succeed has the confidence to conquer the world. She can dream bigger, and do more. She can realize her full potential. ***She can be truly amazing.***

“I start where I really know my stuff.”

“I work at a pace that’s just right for me.”

“Each step is small enough so I can take it on my own.”

“I have to really, really nail it before I move ahead.”

“I did it myself and I want to do more!”

“Doing a little every day keeps me on top of my game.”

Your child has the potential to reach great heights. But towering achievement requires a foundation strong enough to support it, and one weak spot can topple everything. That’s why your child starts Kumon at a level before any learning gaps have crept in to hinder him. From there he builds layer upon secure layer. With a rock-solid foundation beneath him at every level, he can go as high as his ambition takes him.

A child who is never forced ahead and never held back can advance comfortably, and to the best of his ability. He can take the time he needs to work through concepts that don’t come as easily, and breeze through others that do. With Kumon your child’s progress is driven only by his own ability and initiative. He’s never constrained by his school grade level or somebody else’s expectations.

Our curriculum advances so logically and so *gradually* that your child can figure things out for himself. With Kumon he learns by doing instead of being taught how. Advancing in this way, he masters calculation and comprehension skills at every level through his own efforts. Kumon won’t mirror your child’s school curriculum because its aims are different. But it will help him do better—in school, and far beyond.

There’s mastery, and then there’s *mastery*. At Kumon it means getting everything right within a given period of time. It’s not about forcing your child to work faster. It’s about applying concepts until they become second nature, so he can work without struggle or hesitation. Finishing assignments with *speed, accuracy, and independence* proves he really gets it, and gets it for good.

Kumon students are the very picture of focus, concentration, and self-discipline. It’s part and parcel of doing their Kumon every day. Most attend the Center twice a week and complete assignments at home all other days. They take just 15 or 20 minutes. But a little goes a long way toward fostering study habits that make your child more productive. And working more efficiently creates time for other activities that kids thrive on.

With Kumon your child is motivated to achieve more.

Every success is his own, so it’s that much more rewarding. It fuels his desire to do more and succeed yet again. As he takes ownership of the learning process, he gains ever more self-reliance and motivation along the way—benefits that last a lifetime.

Behind every promising Kumon student is a committed Kumon parent.

You play an important role in your child’s success with Kumon. That means always being aware of what he is working on, creating the best environment for home assignments, and providing encouragement whenever it’s needed. Understanding how the program works and all your child stands to gain as a Kumon student can go a long way toward attaining the best results.

We learn from our students, too.

The Kumon Method as practiced by Instructors today is the culmination of our experience with more than 16 million students in 45 countries since 1958. This has contributed to a better understanding of how children learn most effectively. Findings gathered and reviewed on a regular basis are used to refine the learning techniques first developed by founder Toru Kumon. His belief that every child has hidden potential—and the ability to fully realize it—remains our guiding principle.

Boosting
achievement
with
Kumon

Your child's potential is
waiting to be fulfilled.

What are you waiting for?

CALL 877-586-6671 OR VISIT KUMON.COM
to get in touch with a Kumon Instructor at a Center
near you. An Instructor will be happy to meet with
you to explain how Kumon can address your
child's needs and arrange a free Placement Test.
Students may enroll any time of year, even
summer. After all, a journey of self-discovery can
take your child places you never imagined. And
nothing should keep her from getting there.
